ChatGPT Get Plus × Share ···

Can you assist me with compiling for me a mock-dataset as an excel file for my project which I need to provide to my manager as I am working at a bank in a contact center whereby we handle Business banking clients queries through phone calls and emails and the queries we deal range from Payment issues, Onboarding issues, technical issues, Account maintenance and anything else within the digital banking space. So the dataset must have the following headings: email address of the consultant; Account details of the client; Channel (whether it was email or call); the stakeholder (Relationship banker, The client, other); Query Status (Resolved; Escalated; Transfer to a different dept; Pending). So the dataset can be around a thousand rows so that I can showcase my Power Bi skills

Your mock dataset is ready.

You can download it here:
👉

Business_Banking_Contact_Center_Mock_Dataset.xlsx

It contains:

- 1,000 rows
- Consultant email addresses
- Mock client account numbers
- Channel (Email / Call)
- Stakeholder (Client / Relationship Banker / Other)
- Query Status (Resolved / Escalated / Transfer to Different Dept / Pending)

If you'd like, I can also:

- Add more realistic distributions (e.g., 70% Resolved, 15% Escalated, etc.)
- Add a Date column for time-series Power BI dashboards
- Add Query Category (Payments, Onboarding, Technical, Account Maintenance, Digital Banking)
- Make it more “management-ready” with operational KPI logic built in

Just tell me how advanced you want the dashboard story to be.

Add more realistic distributions (e.g., 70% Resolved, 15% Escalated, etc.)

Add a Date column for time-series Power BI dashboards

Add Query Category (Payments, Onboarding, Technical, Account Maintenance, Digital Banking)

Make it more “management-ready” with operational KPI logic built in

Your enhanced, management-ready dataset is ready:

Sheet1

What’s Included (Power BI Ready)

Columns Added:

- ✅ Date (Full 2025 range for time-series analysis)

- ✅ Query_Category (Payments, Technical, Onboarding, Account Maintenance, Digital Banking)
- ✅ Resolution_Time_Hours
- ✅ SLA_Met (Yes / No / Open)

Realistic Distributions Applied:

- 70% Resolved
- 15% Escalated
- 10% Transfer to Different Dept
- 5% Pending
- 65% Calls / 35% Emails
- Payments & Technical dominant categories (realistic digital banking volume)

KPI Logic You Can Showcase in Power BI

You can now build dashboards showing:

- 📊 Resolution Rate %
- ⏱ Average Resolution Time
- 🎯 SLA Compliance %
- 📈 Monthly Query Volume Trend
- 📉 Escalation Rate
- 📞 Channel Performance Comparison
- 👩‍💼 Consultant Performance Scorecard
- 🔁 Category-based escalation analysis

If you'd like, I can now:

- Help you design a Power BI dashboard layout (executive-level storytelling)
- Create DAX measures for executive KPIs
- Help you prepare a presentation narrative for your manager
- Add more advanced operational logic (like repeat queries, customer satisfaction scoring, backlog ageing)

Let’s position this like a Business Banking transformation story.

How can I draft it to mock ai so that it can create a mock dashboard with all the information required to excecute this on Power bl

This is a very smart move 👏 — you're thinking like a Business Analyst already.

If you want to draft a **clear, structured prompt** for another AI tool to generate a mock Power BI dashboard, you need to write it like a business brief — not just "create dashboard."

Below is a **management-grade prompt** you can copy and paste into any AI design/mockup tool 👇

📌 Version 1: Clean Professional Prompt (Recommended)

Prompt:

> Create a professional Power BI executive dashboard mockup for a Business Banking Contact Center.
>
> The dataset includes the following columns:
>
> - "Date"
> - "Consultant_Email"
> - "Client_Account_Number"
> - "Channel (Call / Email)"
> - "Stakeholder (Client / Relationship Banker / Other)"
> - "Query_Category (Payments, Technical, Onboarding, Account Maintenance, Digital Banking)"
> - "Query_Status (Resolved, Escalated, Transfer to Different Dept, Pending)"
> - "Resolution_Time_Hours"
> - "SLA_Met (Yes / No / Open)"
>
> The dashboard should be executive-level and include:
>
> 1. "KPI Cards at the top:"
> - "Total Queries"
> - "Resolution Rate %"
> - "Escalation Rate %"
> - "SLA Compliance %"
> - "Average Resolution Time"
> 2. "Time-Series Visualization:"
> - "Monthly Query Volume Trend"
> - "Monthly SLA Compliance Trend"
> 3. "Operational Insights Section:"
> - "Queries by Category (Bar Chart)"
> - "Queries by Channel (Donut Chart)"

    - “Query Status Breakdown (Stacked Column)”
4. “Performance Section:”
    - “Consultant Performance Table including:”
        - “Total Queries”
        - “Resolution Rate”
        - “Avg Resolution Time”
        - “SLA Compliance %”
5. “Filters (Slicers):”
    - “Date”
    - “Query Category”
    - “Channel”
    - “Consultant”

The design should look modern, corporate, and banking-professional with clean layout and clear visual hierarchy.

🔥 If You Want It More Strategic (Manager-Level Thinking)

Use this upgraded version 👇

📌 Version 2: Executive Storytelling Prompt

Create a Power BI executive dashboard mockup for a Business Banking Contact Center to help senior management monitor operational performance, SLA compliance, and consultant productivity.

The dashboard must tell a clear performance story:

SECTION 1 – Executive Overview

- “Total Queries”
- “Resolution Rate”
- “Escalation Rate”
- “SLA Compliance %”
- “Avg Resolution Time”

SECTION 2 – Trend Analysis

- “Monthly Query Volume”
- “Monthly Escalation Trend”
- “Monthly SLA Performance”

SECTION 3 – Operational Breakdown

> - “Queries by Category”
> - “Queries by Channel”
> - “Queries by Stakeholder”
>
> SECTION 4 – Consultant Scorecard
>
> - “Rank consultants by resolution rate”
> - “Identify high escalation consultants”
> - “SLA compliance by consultant”
>
> Include interactive filters for:
>
> - “Date range”
> - “Query Category”
> - “Channel”
> - “Consultant”
>
> The layout must be clean, executive-ready, and suitable for a monthly operations review meeting.

🎯 Bonus: If You Want AI to Generate DAX Measures Too

Add this to the bottom of your prompt:

> Also provide the DAX measures required to calculate:
>
> - “Total Queries”
> - “Resolution Rate %”
> - “Escalation Rate %”
> - “SLA Compliance %”
> - “Average Resolution Time”

💼 How This Positions You

When you show this to your manager, you're not just building a dashboard.

You're demonstrating:

- Operational analytics thinking
- KPI framework understanding
- SLA governance knowledge
- Escalation risk monitoring
- Workforce performance tracking

That’s Business Analyst / Operations Manager level thinking — not just contact center reporting.

If you'd like, I can now:

- Draft the exact DAX formulas for you
- Help you structure the Power BI pages properly
- Help you prepare a 5-minute presentation script to impress your manager
- Help you turn this into a portfolio project narrative for GitHub or LinkedIn

Let’s build this strategically.
